DETAILED ACTION

Election/Restrictions

1. Applicant's election with traverse of Group I, Claims 1-9, in the reply filed on January 19, 2006 is acknowledged. The traversal is on the ground(s) that the other independent claims are sufficiently linked to Claim 1. This is not found persuasive because Group I and Group II are in two different classes.

The requirement is still deemed proper and is therefore made FINAL.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
- 3. Claims 1-4 and 7-9 are rejected under 35 U.S.C. 102(b) as being anticipated by Galaj et al., U.S. Patent No. 5,059,366.

Regarding Claim 1, Galaj discloses a method of manufacturing a metallic filtration material, comprising the steps of: (a) forming a metallic filtration media (Col. 6, Lines 51-57), and (b) applying a protective coating to the metallic filtration media by either chemical vapour deposition or physical vapour deposition (Col. 7, Line 59 – Col. 8, Line 3).

Regarding Claim 2, Galaj discloses that the metallic filtration media is formed from metal fibres, metal powder, metal wires, woven metal mesh or any combination thereof (Col. 5, Lines 6-13).

Regarding Claim 3, Galaj discloses the step of forming the metallic filtration material into a filter unit, by providing the filtration media with a supporting structure (Col. 8, Lines 6-10).

Regarding Claim 4, Galaj discloses that the filtration media is applied to part or all of the supporting structure (Col. 8, Lines 6-10).

Regarding Claim 7, Galaj discloses that the filtration media is provided with the supporting structure before the protective coating is applied to the filtration media (Col. 8, Lines 6-23).

Regarding Claim 8, Galaj discloses a step of applying the protective coating to the supporting structure (Col. 8, Lines 6-23).

Regarding Claim 9, Galaj discloses that the filtration media and the supporting structure are provided with the protective coating in the same application process (Col. 8, Lines 6-23).

4. Claims 1, 3, and 5-6 are rejected under 35 U.S.C. 102(b) as being Edlund by U.S. Patent No. 5,498,278.

Regarding Claim 1, Edlund discloses a method of manufacturing a metallic filtration material, comprising the steps of: (a) forming a metallic filtration media (Col. 8, Line 64 – Col. 9, Line 15), and (b) applying a protective coating to the metallic filtration media by either chemical vapour deposition or physical vapour deposition (Col. 10, Lines 45-55).

Regarding Claim 3, Edlund discloses the step of forming the metallic filtration material into a filter unit, by providing the filtration media with a supporting structure (Col. 10, Lines 45-55).

Regarding Claim 5, Edlund discloses that part or all of the supporting structure is applied to the filtration media (Col. 10, Lines 45-55).

Application/Control Number: 10/691,345

Art Unit: 1723

Regarding Claim 6, Edlund discloses that the filtration media is provided with the supporting structure after the protective coating is applied to the filtration media (Col. 10, Lines 45-55).
